AVIA SYNTOFLUID PE-B

High performance hydraulic oil PAO-based

AVIA SYNTOFLUID PE-B is high performance hydraulic oil for extended oil change intervals. Besides the excellent performance the oil is biodegradable ((according to CEC-L-33-A-93 / CEC-L-103-12) for poorly water-soluble oils >80 % (21 days)) and can be applied in areas where biodegradable lubricants are required. This CEC test method directly observed the disappearance of the oil to the degradation level of water solubility. The field trial of the medium was already done and the product has proved its worth in various applications. From stationary equipment's in steel construction/water engineering, machine tools and injection moulding machines to the use in snow blowers up to forestry machines and earthmoving/civil engineering equipment's.

Features:

- Very good cold start behavior up to -40°C / no long warm-up times
- Miscibility with mineral oil like oils among each other
- No aggression against seals and hoses
- No hydrolysis instability in the presence of water/ no water filters necessary
- Excellent temperature/viscosity characteristics
- Fuel saving potential by components protection
- Suitable for areas where biodegradable lubricants are required
